

The Climate Policy Landscape in Alberta

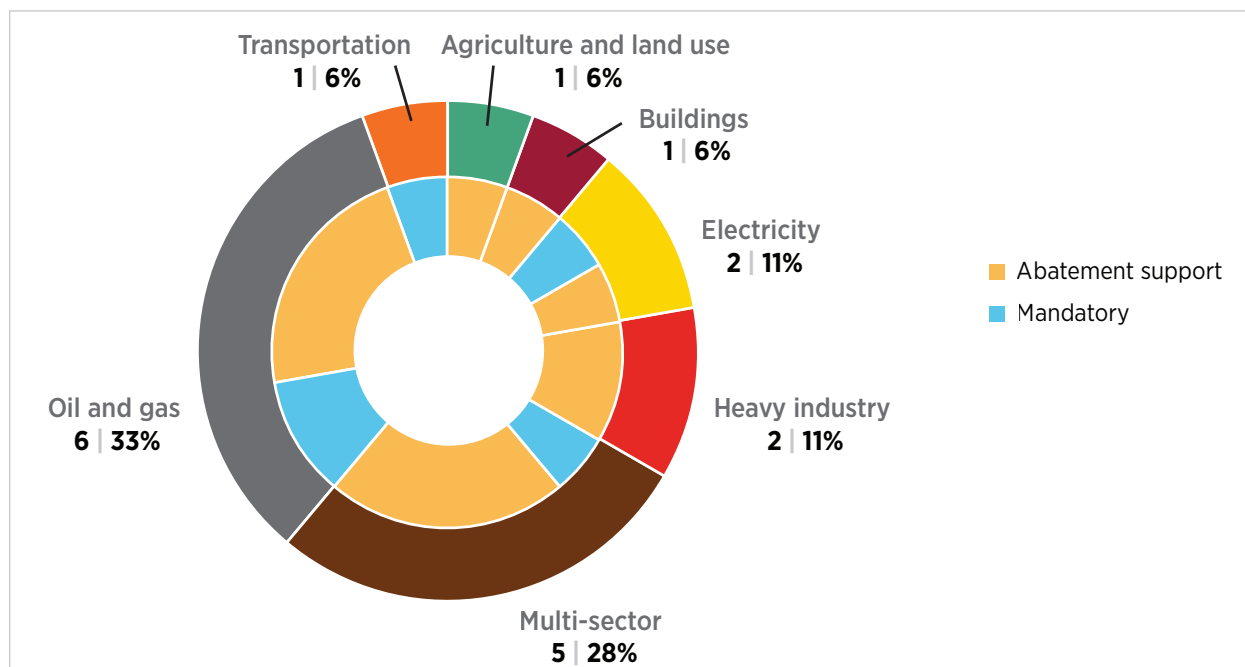

By Ruba Khan, Katharina Koch, Alaz Munzur and Jennifer Winter
February 2025

Of the 341 total emissions-reduction policies in the **Canadian Climate Policy Inventory**, Alberta has 18 policies, or five per cent. The Government of Canada has implemented the largest number (71 policies).

Figure 1 shows the policy instruments employed by the Government of Alberta, categorizing them by sector. The inner ring highlights the share of instrument types—abatement support, indirect or mandatory—by sector, while the outer ring indicates the percentage of total policies targeting each sector.

Policies are classified by instrument type based on how they reduce emissions: mandatory, abatement support, and indirect. Mandatory policies impose a compulsory requirement on regulated parties (e.g., regulation). Abatement support policies incentivize voluntary adoption or development of lower emissions processes or products, (e.g., consumer subsidies). Indirect policies do not require or directly incentivize abatement but nevertheless contribute to emissions abatement (e.g., enabling legislation and information). Mandatory policies are generally considered to be more effective in reducing emissions than opt-in abatement support or indirect policies. Notably, Alberta has no indirect policies.

KEY FACTS

- Carrots (abatement support) dominate compared with sticks (mandatory action) in Alberta. Carrots: e.g., Alberta Carbon Capture Incentive program. Sticks: e.g., the *Renewable Electricity Act*.
- Broadly applied sector-specific policies are common (e.g., the Methane Emissions Reduction Regulation).
- Most policies reduce emissions through energy source decarbonization.
- Policies targeting the oil and gas and multi sector account for most emissions-reduction policies (e.g., the *Oil Sands Emissions Limit Act*).
- Notably, Alberta does not have any policies exclusively targeting waste.
- Only three policies are narrowly scoped (e.g., coal-powered electricity phaseout), which are technology or project specific.

In Figure 2, the chart displays the number of policies by the policy instrument applied to mitigate emissions.

ABOUT C2P2

The Canadian Climate Policy Partnership (C2P2), led by [Dr. Jennifer Winter](#) provides publicly accessible information on Canadian climate policies, supporting effective strategies to adapt and mitigate climate change, improving resilience, and helping Canada meet its net-zero emissions target.

Partners and funders include the Canadian Climate Institute, CIRANO (Centre Interuniversitaire de Recherche en Analyse des Organisations), the Government of British Columbia, the Government of Canada's Environmental Damages Fund, Mitacs, Quebec Net Positif, Royal Roads University, the Smart Prosperity Institute, the Social Sciences and Humanities Research Council, the Office of the Vice-President (Research) at the University of Calgary, and the School of Public Policy at the University of Calgary.
