The Climate Policy Landscape in Saskatchewan

By Ruba Khan, Katharina Koch, Alaz Munzur, Grace Schaan and Jennifer Winter

Of the 359 total emissions-reduction policies in the **Canadian Climate Policy Inventory**, Saskatchewan has 13 active policies (four per cent) and one inactive policy. The Government of Canada has the largest number (74 active policies).

Figure 1 shows the active policy instruments employed by the Government of Saskatchewan, categorizing them by sector. The inner ring highlights the share of instrument types — abatement support, indirect or mandatory — by sector, while the outer ring indicates the percentage of total policies targeting each sector.

Policies are classified by instrument type based on how they reduce emissions: mandatory, abatement support, and indirect. Mandatory policies impose a compulsory requirement on regulated parties (e.g., regulation). Abatement support policies incentivize voluntary adoption or development of lower emissions processes or products (e.g., consumer subsidies). Indirect policies do not require or directly incentivize abatement but nevertheless contribute to emissions abatement (e.g., enabling legislation and information). Mandatory policies are generally considered to be more effective in reducing emissions than opt-in abatement support or indirect policies. Active policies are those currently requiring compliance or providing support, including policies that are proposed or announced. This category also includes abatement support policies (e.g., consumer subsidies) that are fully subscribed but still have ongoing projects. Inactive policies are those that have concluded as scheduled, or have been suspended or cancelled.

Note: This figure does not include inactive (cancelled, concluded, or suspended) policies.

KEY FACTS

- In Saskatchewan, there are slightly more carrots (abatement support) than sticks (mandatory action). Carrots: e.g., energy efficiency rebates. Sticks: e.g., *Renewable Diesel Act*. Notably, Saskatchewan has no indirect policies.
- There are 13 implemented policies.
- Since publication of the first version of the C2P2 database in **August 2024**, one policy has been suspended.
- There are 67 active federal policies that apply in Saskatchewan (eight mandatory, 55 abatement support, and four indirect policies).
- Most policies reduce emissions through improving energy efficiency and end-use fuel switching.
- Policies targeting the transportation and buildings sectors or multiple sectors account for most of Saskatchewan's policies.
- Narrowly scoped policies that are technology or project-specific are common (e.g., the SaskPower Energy Assistance program).
- Broadly applied sector-specific policies (e.g., building energy efficiency standards) are slightly less common.
- Saskatchewan does not have any policies exclusively for waste or heavy industry.

Figure 2 displays the number of policies by the policy instrument applied to mitigate emissions.

ABOUT C2P2

The Canadian Climate Policy Partnership (C2P2), led by **Dr. Jennifer Winter**, provides publicly accessible information on Canadian climate policies, supporting effective strategies to adapt and mitigate climate change, improving resilience, and helping Canada meet its net-zero emissions target.

Partners and funders include the Alberta Real Estate Foundation, the Canadian Climate Institute, CIRANO (Centre Interuniversitaire de Recherche en Analyse des Organisations), the Government of British Columbia, the Government of Canada's Environmental Damages Fund, Mitacs, Quebec Net Positive, Royal Roads University, the Smart Prosperity Institute, the Social Sciences and Humanities Research Council, the Office of the Vice-President (Research) at the University of Calgary, and the School of Public Policy at the University of Calgary.
